Thinking Caps Scorecard

Brainstorm everything that could go wrong in **possible failures** & how you would know if the failure happened (failure indicator). Rate the **likelihood** and **impact** on a scale of 1-10.
Multiply likelihood by impact for **overall rating**, then **rank** this score in the final column.

Possible failure	**Failure indicator**	**Likelihood** (1-10)	**Impact** (1-10)	**Overall rating**	**Ranking**

Hard hats Template

Using your **thinking caps scorecard**, look at the rank of possible failures. Find ways to **remove the risk** of failure; if this is not possible, find ways to **reduce the risk** of failure.

Rank	Possible failures	Ways to eliminate failure	Ways to reduce failure
